

Steven Moran

Senior Engineer

Steven joined Structure Workshop in 2013 as a graduate following completion of the Structural Engineering & Architecture course at the University of Sheffield. The multi-disciplinary course has led to an interest in working collaboratively across the conventional boundaries of each discipline.

Having gained specialist experience in detailing façade systems and in art & architectural fabrication, Steven has come to specialise in the design of art and architectural installations in both the public and private realm. Steven enjoys working closely with London's leading artists, designers, and makers to develop creative and pragmatic solutions to the project brief.
